# HALO® ELEVATE C18

# TAKING SEPARATIONS TO A HIGHER LEVEL

Built upon proven Fused-Core® particle technology for speed and efficiency, the HALO® Elevate C18 incorporates surface modified organo-silane technology for alkaline resistance resulting in excellent stability in high pH environments.

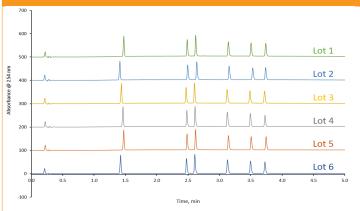

With a wide operational use range of pH 2-12, HALO® Elevate allows for robust method development and improved separations for basic compounds that may present problems at lower pH for poor peak shapes, inadequate retention or limited load tolerance. Ideal for use with high pH mobile phases.

#### FEATURES OF HALO® ELEVATE C18

- Excellent stability for high pH, high temperature environments
- Flexible to work the full range of operating conditions for separation selectivity of acids, bases, neutrals and zwitterions
- Proven HALO® Fused-Core® technology for separation speed and chromatographic efficiency
- C18, USP L1 2.7 um 120 Å particle

#### **EXCELLENT LOT-TO-LOT REPRODUCIBILITY**

Lot-to-lot reproducibility is crucial when developing tested using a mix containing a neutral compound and 5 basic compounds. The average %RSDs across all of the compounds was < 0.6%.

# **APPLICATIONS**

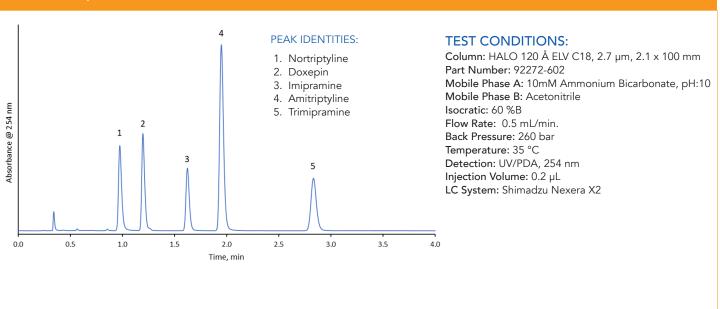

#### THE SPEED OF FUSED-CORE®

In this separation of Omeprazole (pKa 9.3), related compounds and impurities, the HALO® Elevate C18 is able to reduce the run time by >84% of the original USP method saving significant time and solvent while maintaining baseline resolution of all nine compounds.

#### A SEPARATION OF ANTIDEPRESSANTS IN UNDER 3 MINUTES

Tricyclic antidepressants (TCAs) are a class of drugs primarily used to manage depression. A separation of antidepressants is achieved under high pH conditions using a HALO® Elevate C18 column. Excellent peak shape and selectivity is achieved in under 3 minutes.
